A product of the Phönix Klangsäulen GmbH

Warranty document

Congratulations!

With our sound column one now has the luxury to receive the best quality of sound from any angle one chooses. Our technique allows the same pleasure of listening at any spot of your room.

To better enjoy our product we offer you some simple advice of its positioning and its functions.

Placement of sound columns

With the use of our sound columns as loudspeakers many new possibilities of placement are available. To maximize the effectiveness of our sound columns they should be placed near walls with a distance of 30 – 50 cm between wall and sound column (about 1.5 feet). These sound columns can also be placed diagonally if the layout of the room requires, giving the listener a wrap – around effect.

The connection of the sound column to the amplifier is made with a 2-adrig commercial loudspeaker cable. The gleichphasig connection of both sound columns is imperative, therefore the positive connection poles at the sound columns, loudspeaker cables and amplifier are marked red. The use of loudspeaker cables with a cross – section of 2,5 mm² is recommended for most placements, lager cable diameters are required of longer distances (> 10m or 3,5 feet). In larger rooms or serving 2 areas 4 sound columns can be utilized. All 4 sound columns can be connected to a commercial and customary amplifier.

Care of equipment

The sound columns need no extra care. Dust should be removed with a soft brush. The foil may not be treated with chemical agents, but may be wiped off with a dry cloth.

Guaranty

Warranty for perfect function is insured according to the attached document. The basic guaranty is 24 months. Please note that no intervention by a third party is permitted.

Additional guaranty

We grant an extended guaranty of an additional 24 months on all sound columns. How ever this is granted only by registration of customers with manufacturer and must occur within 4 weeks of the purchase date.

Manufacturer tip

We reserve the right to make technical improvements on our product.

Should you have further questions about the sound column, please feel free to contact us at the following address:
